Confirmed! Global warming *is* 'settled' – as a scam 'Climategate' author unveils evidence of 'every deception imaginable'

Posted: April 20, 2010
9:18 pm Eastern

By Bob Unruh

WorldNetDaily

Al Gore's insistence that global warming is "settled science" has been used to defend claims humanity is on the edge of destroying the world. Now author Brian Sussman, whose [book "Climategate"](#) is being released Thursday – Earth Day – agrees it's "settled," as a scam.

Sussman unveils in his book evidence that the move to restrict carbon-dioxide emissions, tax a multitude of energy programs and create a "Big Brother" that would limit household energy use, among other programs, is a move to give government unlimited control over people.

National Public Radio reported in 2007 how Gore took his "climate-change crusade" to Congress and said the science on the issue was "settled." Then in 2009 the Environmental Protection Agency declared carbon dioxide and other emissions are endangering the future of the world.

Be the first to see the full documentation of how your life could be changed by climate-related laws, taxes and regulations, in "Climategate"

Sussman's book, the newest title by WND Books, has been charting for several weeks already among Amazon's top 10 preordered titles. It warns that believing global warming is "settled science" is a danger itself.

He writes that the now-notorious intercepted e-mails that reveal leading global-warming supporters exchanging plans to squelch critics and falsify data are just the tip of the iceberg.

(Story continues below)

If you thought the record cold winter, expanding polar ice and other factors would make global-warming supporters "chill out," guess again, he writes.

"These people have a plan and they intend to control much more than your thermostat," the book says.

In "Climategate," he explains the science of the subject and how politics have taken control of the data. Further, he explains how many of the global-warming promoters are out to make a buck for themselves.

"It's obvious to everyone that this global-warming facade is in meltdown mode," said Joseph Farah, publisher of WND Books and founder and CEO of WorldNetDaily.com. "Now Brian's important book comes along just in time to reveal exactly why this Big Lie was foisted on us to begin with and what we can do to stop it cold."

Among other things, "Climategate" reveals the underlying fraud of environmentalism in America. It also depicts the myth that global warming is the consensus of the scientific community.

The book traces the origins of a "climate-scare" agenda to the "diabolical minds of Marx and Engels in the 1800s – down the ages to the global governance of the United Nations today."

On the issue of carbon dioxide, the book points out that nature needs carbon dioxide and generates it through multiple natural processes to ensure its availability.

"Decomposing vegetation, the carcasses of dead animals, forest fires, smoldering peat bogs, volcanoes, plowed soil, weathering rocks, human utilization of fossil fuels, and even termites and crustacean shells – all exude carbon dioxide beneficial to the plant kingdom," he writes. "And the more carbon dioxide in the atmosphere, the more content the plants become – just ask anyone who has worked in a greenhouse.

"In fact, that is a portion of the carbon-dioxide debate no one bothers to address – the plant kingdom would abound if carbon-dioxide levels were to increase in the global atmosphere," he writes.

WND previously reported among the topics discussed in the book is whether there soon could be "Green Goon Squads" at your door, checking your energy usage.

The author explains federal legislation includes a set of regulations for energy efficiency that will be enforced "by a national, green goon squad."

"The legislation also authorizes the Secretary of Energy to 'enhance compliance by conducting training and education of builders and other professionals in the jurisdiction concerning the national energy-efficiency building code.'"

Sussman warns the focus is not to save energy and money.

"It's a social-engineering scheme, designed and promoted by the federal government to change your behavior," he said.

Pollution actually has been decreasing, significantly, he documents.

From 1980 to 2005, for example, he wrote, "Fine particulate matter declined 40 percent. Ozone levels declined 20 percent, and days per year exceeding the 8-hour ozone standard fell seventy-nine percent. Nitrogen-dioxide levels decreased 37 percent, sulfur dioxide dropped 63 percent and carbon-monoxide concentrations were reduced by 74 percent. Lead levels were lowered by 96 percent."

Neither are temperatures rising, he documents.

Send President Obama, House Speaker Pelosi and Senate Majority Leader Reid a Constitution!

"Since 2007, global temperatures are engaged in a significant downward spiral, with government data illustrating a 1°F (.65°C) *drop* in temperature between 2007 and 2008 alone," he reports.

He reports on e-mails that were hacked from the Climatic Research Unit at the University of East Anglia, which contain references to "hiding" information.

"The Climatic Research Unit had been regarded by many as one of the most credible atmospheric institutions in the world, but with the revelation of the e-mail exchanges, their supposed credibility was reduced to junk science," Sussman writes.

"The e-mails reveal that the world's leading climate scientists were working together to block Freedom of Information requests to review their data, marginalize dissenting scientists, manipulate the peer-review process, and obscure, massage or delete inconvenient temperature readings. One certainly wonders, why? Especially since Al Gore has assured the world that 'the science is settled.'"

Taking on the EPA directly, Sussman says, "Carbon dioxide only accounts for thirty-eight-thousandths of a percent of our planet's atmosphere. It is known as a variable gas, because, like water vapor, it has historically fluctuated. And what percentage of the minuscule amount of CO₂ is produced by the activities of man, including the utilization of fossil fuels? According to a thorough analysis by the Carbon Dioxide Information Analysis Center, a research wing of the U.S. Department of Energy, it is only 3.207 percent. All of this hoopla over an atmospheric component so minute, it is difficult to comprehend."

What could be driving the agenda of global warming? Dollars, he suggests.

"It's widely reported that Al Gore is worth at least \$100 million, although my well-connected [source] believes it may be closer to \$500 million. Quite a success story for a guy, who, according to financial-disclosure records released just prior to his bid for the presidency, had a net worth near \$2 million," he writes.

Last December, the EPA signed two findings that concluded greenhouse gases in the atmosphere "threaten the public health and welfare of current and future generations." The EPA's rulings could mean thousands of dollars in additional taxes for individual consumers.

Energy and Commerce Committee Ranking Member Joe Barton, R-Texas, then cited the doubts about the integrity of "climate change" science in a letter and asked for an accounting of U.S. taxpayer support for the United Nations' Intergovernmental Panel on Climate Change.

University of East Anglia Climatic Research Unit

The U.S. since 1994 has given some \$50 million to the panel, and contributions under President Obama now have doubled.

Sussman, formerly a highly acclaimed San Francisco meteorologist, also is the newest morning host at KSFO Radio (560 AM), the highest-rated talk show in the San Francisco Bay Area and the fourth-largest radio market in the country.

In the original scandal that spawned the name Climategate, the hacked e-mails of Phil Jones, head of the Climatic Research Unit in Norwich, England, and others uncovered schemes to employ "tricks" with warming trends, squelch skeptics and defame journals that published them.

Earth Day is all the evidence of deception needed, said Sussman. First celebrated in 1970 on the 100th anniversary of the birth of communist leader Vladimir Lenin, it was founded by Sen. Gaylord Nelson, D-Wis.; former Stanford student-body president Denis Hayes; and author and Stanford professor Paul Ehrlich.

"Lenin's core political philosophy was linked at the hip with these newly fangled environmentalists who maintained that America's government must be altered, its economy planned and regulated, and its citizens better controlled," writes Sussman. "The environment would be the perfect tool to force these changes, and the most efficient way to gain converts would be through the public-school system – the earlier the better."

Sen. James M. Inhofe, R-Okla., has suggested the Justice Department investigate scientists for potentially falsifying data. And the Orange County Register has posted a chart for consumers to try to keep up with all the scandals developing in the "global warming" community.

Among the scandals listed are:

- ClimateGate: The scandal over the Climatic Research Unit e-mails from East Anglia.
- FOIGate: In which British officials are investigating whether East Anglia scientists refused to follow that nation's freedom-of-information law about their work.
- ChinaGate: In which dozens of weather monitoring stations in rural China apparently have simply disappeared. This would lead to higher temperature averages since city levels frequently are warmer.
- HimalayaGate: In which an Indian climate official admitted in January that he falsely claimed Himalayan glaciers would melt away by 2035 to prod governments into action.
- And PachauriGates I and II, SternGates I and II, AmazonGate (in which a claim that global warming would wipe out rain forests was exposed as a fraud), PeerReviewGate, RussianGate I and II and nearly a dozen others.

WND also reported recently when the St. Louis-based Peabody Energy, the largest private coal company in the world, petitioned the EPA to re-examine its decisions in light of the controversy over the scientists' e-mails.

The company noted the "seriousness of the flaws" in the work.

Given the EPA's "extensive reliance" on those reports, "the agency has no legal option but to re-examine the Endangerment Finding in light of this new information," the petition said.

On its website, the company said the EPA's earlier ruling "could mean regulation of hundreds of thousands and perhaps millions of buildings, farms, businesses and other facilities in the U.S."

Texas officials also have filed a lawsuit accusing the federal government of using "tainted" information to arrive at the EPA conclusion and it asks that the EPA's decisions be set aside. Virginia's attorney general, Ken Cuccinelli, also filed a petition demanding the EPA reconsider its greenhouse-gas finding.

The scientific community actually is anything but unanimous on climate change.

The disunity is documented by the Petition Project, launched some 10 years ago when the first few thousand signatures were gathered. The effort by Art Robinson, a research professor of chemistry and cofounder of the Linus Pauling Institute of Science and Medicine in 1973, now lists tens of thousands of qualified scientists who endorse the following statement:

There is no convincing scientific evidence that human release of carbon dioxide, methane, or other greenhouse gases is causing or will, in the foreseeable future, cause catastrophic heating of the Earth's atmosphere and disruption of the Earth's climate. Moreover, there is substantial scientific evidence that increases in atmospheric carbon dioxide produce many beneficial effects upon the natural plant and animal environments of the Earth.

Among the original e-mails hacked from East Anglia and posted online was, "The fact is that we

can't account for the lack of warming at the moment and it is a travesty that we can't. The CERES data published in the August (Bulletin of the American Meteorological Society) 09 supplement on 2008 shows there should be even more warming: but the data are surely wrong. Our observing system is inadequate."
